

# JAKE SCOTT

## FULL STACK SOFTWARE DEVELOPER

- Agile Development - Scrum Framework - JavaScript - CSS - Flexbox - React - Python  
- Django Application Framework - SQL - Django REST Framework - Django ORM

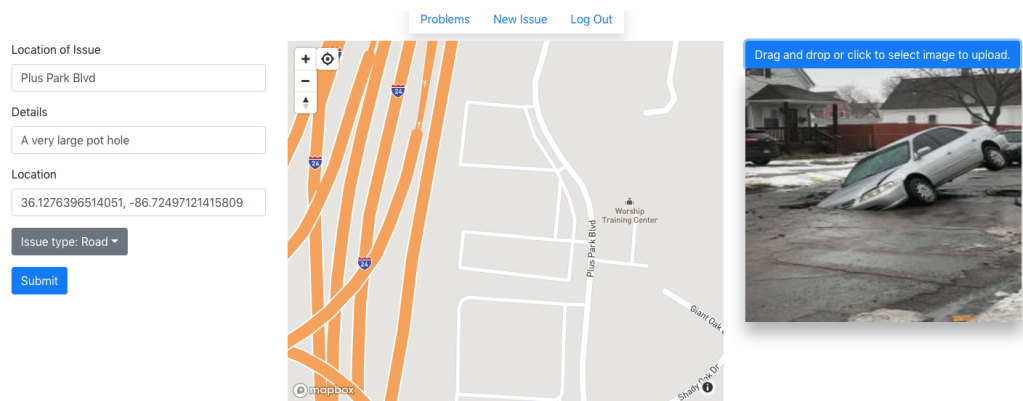

### ABOUT ME

I am a combination of creative and analytical, finally in a career where this duality can co-exist, and excited for the next step in my career. As a business owner and fabricator, I was able to explore my creativity and pore over details and strategy, but the small scale auto repair industry left me wanting more. As a software developer, I am able to bring my analytical and creative mindset together in a harmonious way.

### OURCITY

 OurCity- React.js, MapBox API, Cloudinary API, Bootstrap, CSS  
A single page, responsive, CRUD web app built for raising critical infrastructure defects to the officials that have the power to resolve these problems. I developed this app after noticing the roads and sidewalks in the lower income areas where people utilize the sidewalks as a means of transportation rather than enjoyment, were in poor condition compared to the sidewalks in higher income areas.

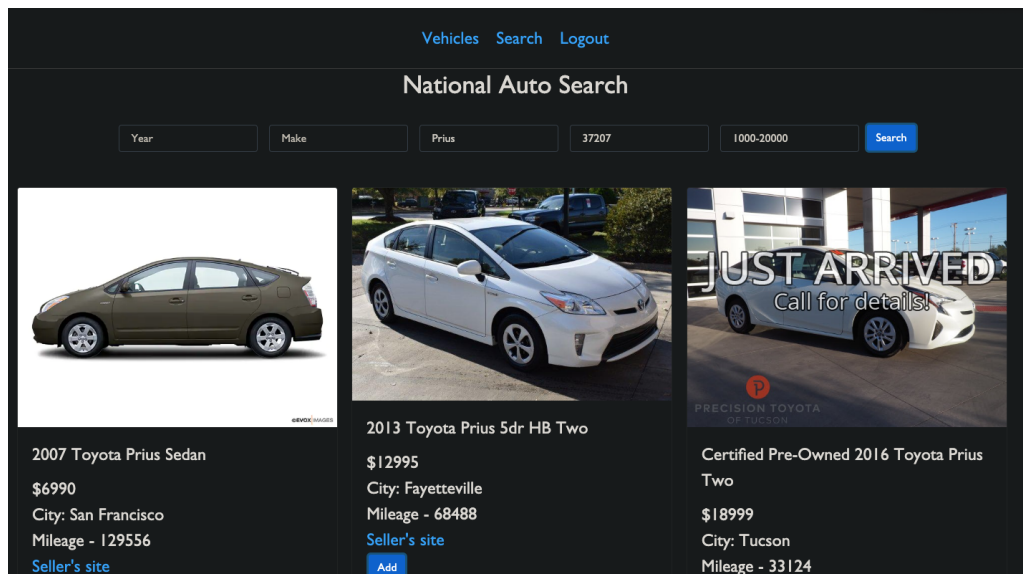

*-Click for repo*

### AUTOSEARCH

 AutoSearch - Django, Python, SQL, SemanticUI, JSON  
AutoSearch is an app I created for my final capstone. I wanted an app that would search the entire internet of cars for sale without having to navigate through promoted vehicles and websites. I also wanted to be able to save my favorite cars to one page for comparison. This site did all that and could filter my search by location, price, and vehicle.
